Key Design Principals

SIX PARKS

Unique Park Designs

Establish unique designs based on the neighborhood needs, desires, and characteristics.

Connectivity

Expand a comprehensive, interconnected Multi-Modal System to provide safe bicycle & pedestrian access. Understand parks will function as trail heads

Multigenerational Play

Prove a range of recreational programming for different age groups, interests and community needs.

Safety

Provide pedestrians scale lighting, open sightlines across the park and create visible gathering and spaces employing CPTED principles.

Ecology

Establish areas for stormwater management to control runoff and improve water quality to adjacent tributaries. Support habitat for pollinators, birds, and other fauna.

Infrastructure

Core park infrastructure must come first – clean restrooms, safe paths, engaging play areas, safe spaces to gather, and programming to compliment future infrastructure.
